DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to an apparatus for chemical synthesis, classified in class 422, subclass 99.
 - II. Claims 13-25, drawn to a method of conducting parallel chemical synthesis, classified in class 436, subclass 180.
 - III. Claim 26, drawn to a method of using tightly sealed synthesis retaining medium, classified in class 436, subclass 178.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II/III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus since process claim 13 of invention II and process claim 26 of invention III do not recite the particulars of the apparatus, such as the dimensions and configuration of the plate with a plurality of wells with a synthesis reaction medium disposed in the well and the at least one valve and nozzle of the supply assembly. Furthermore, the apparatus could be used for storing liquids, detecting for the presence of certain antigens by fluorescence, or washing microplates.
3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be

Art Unit: 1743

separately usable. In the instant case, invention II has separate utility such as testing the suitability of a dispensing assembly with a particular microplate or determining optimal gas flow rates in maintaining a pressurized environment in a manifold/microplate combination. Invention III also has separate utility such as filtering water and samples, such as soil and blood. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for a Group is not required for other Groups, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. A telephone call was made to Y. Rocky Tsao on 12/9/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1743

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
